

Tsubo Niwa House

Location: Hackney, UK

Material Used: ThermoChar® Ash (Medium) and ThermoWood Iroko

This house is a Victorian large single family dwelling situated in Hackney. The project aim was to refurbish and extend the house whilst injecting the clients' creative personalities as designers and makers. The design plans looked to introduce a courtyard to articulate a relationship between the existing house and the new architecture. The rear extension was clad with our ThermoChar® Ash (Medium) hit and miss battens. The full height windows slide back behind the slatted cladding, creating a calm, textured space.

The interior was clad with our ThermoWood Iroko, offering natural and complimenting the Tsubo within the home. Both our natural ThermoWoods and ThermoChar® materials offer 30+ years of durability, are extremely stable and resistance to rotting, warping and cupping, making them a great choice for internal and external use.
